About Me

BS Computer Science student specializing in Artificial Intelligence, with hands-on experience building machine learning workflows, LLM-adjacent tooling, and full-stack web applications. Experienced in delivering end-to-end projects — from production-style ML research to deployed client websites — with a strong interest in LLMs, AI developer tooling, and rapid prototyping. Adept at independently managing full project cycles from design to deployment.

Education

Mapúa University | 2024 – Present

BS Computer Science – Artificial Intelligence Track

Experience

FlyRank | 2026

Machine Learning Intern

- Built an end-to-end machine learning workflow using anonymized production-scale search data to identify high-priority content refresh opportunities.
- Performed data preprocessing, feature engineering, model evaluation, and validation while comparing results against baseline methods.
- Produced a reproducible research paper with interactive visualizations, ranked recommendations, and public GitHub Pages deployment to showcase reproducible ML research.
- Applied Python, scikit-learn, data analysis, and model interpretation techniques while following public-safe reporting practices.

Self-Employed | 2025

Front-End Developer

- Designed and developed 4 client websites end-to-end across the business and fashion industries — Solace (fashion e-commerce), Celesté (cosmetics e-commerce), Thrift Nest (thrift store), and Furever Haven (pet adoption platform) — independently managing consultation, design, and deployment. HTML, CSS, JavaScript.

Machine Learning Projects

Academic Project

Multilayer Perceptron Neural Network using Backpropagation

Python, NumPy, Jupyter Notebook

- Implemented a two-layer Multilayer Perceptron (MLP) from scratch using NumPy, without relying on high-level machine learning frameworks for training.
- Developed forward propagation and backpropagation algorithms with configurable activation functions and mini-batch gradient descent.
- Evaluated model performance using training and validation metrics while experimenting with different hyperparameters and network configurations.
- Produced a reproducible Jupyter Notebook implementation demonstrating the complete neural network training workflow.

Software Engineering & Programming Projects

Mapúa University | 2024 – 2026

- **ALX Desserts** — Web-based POS and inventory management system with integrated GCash QR payment, sales reporting, and receipt generation. Role: Team Lead · Full-Stack Developer | Python, Flask, JavaScript, Tailwind CSS.
- **HotelEase** — Hotel management and booking system with dual-role access for guests and admins. Role: Lead Programmer 2 — logic flow, base/template, GUI, interactivity | Java, JavaFX, Maven.

Skills

Python, Machine Learning, scikit-learn, Pandas, NumPy, REST APIs, Generative AI, Data Analysis, JavaScript, HTML/CSS, Flask, Tailwind CSS, JavaFX, Maven, C/C++, OOP, Git, GitHub, Web Deployment, Tech Troubleshooting

Certifications

- Microsoft AI & ML Engineering Professional Certificate — Microsoft
- IBM Machine Learning — IBM
- AI and Machine Learning Algorithms and Techniques — Microsoft
- Foundations of AI and Machine Learning — Microsoft
- AWS Educate: Machine Learning Foundations — Amazon Web Services
- Data Structures & Algorithms — UC San Diego
- Database Management Essentials — University of Colorado
- Interactivity with JavaScript — University of Michigan
- Python Classes and Inheritance — University of Michigan
- Technical Support Fundamentals — Google
